This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

Claims 1-85 (canceled)

1 Claim 86 (currently amended): A method for manufacturing a
2 product having a coating which comprises manufacturing a
3 base product from at least one mass comprising at least
4 natural polymers, applying a first coating to at least a
5 portion of the base product, and applying a second coating
6 which is different from the first coating over at least a
7 portion of the first coating such that at least a part of
8 the base product is covered by overlapping first and second
9 coatings and a further part of the base product is covered
10 by the first or second coating alone, the surface tension of
11 at least the first coating being approximately equal to or
12 lower than the surface tension of at least the portion or
13 each part of the base product to which the first coating is
14 applied.

1 Claim 87 (currently amended): A method in accordance with
2 claim 86 wherein the surface tension of at least the first
3 coating is lower than the surface tension of at least the
4 portion or each part of the base product to which it is
5 applied.

1 Claim 88 (previously presented): A method in accordance
2 with claim 86 wherein the base product is formed under
3 increased pressure and/or temperature in a mold.

1 Claim 89 (previously presented): A method in accordance with
2 claim 88 wherein the at least one mass further comprises a
3 surface tension reducing agent and is introduced in or
4 through the mold, and wherein the at least one mass is
5 heated in the mold such that cross-linking of the natural
6 polymers occurs.

1 Claim 90 (previously presented): A method in accordance with
2 claim 88 wherein the at least one mass further comprises a
3 release agent in an amount such that when the temperature of
4 the mass is increased a portion of the release agent
5 egresses from the mass and bonds to the molding surface of
6 the mold, and wherein during the manufacture of successive
7 products in the same mold, a substantially constant layer of
8 the release agent always remains bonded to the molding
9 surface.

1 Claim 91 (previously presented): A method in accordance with
2 claim 90 wherein the release agent is also a surface tension
3 reducing agent.

1 Claim 92 (previously presented): A method in accordance with
2 claim 91 wherein the base product is formed by means of
3 injection molding.

1 Claim 93 (previously presented): A method in accordance with
2 claim 91 wherein at least one mass is substantially
3 manufactured as paper-forming mass.

1 Claim 94 (previously presented): A method in accordance with
2 claim 91 wherein at least one of the coatings has a surface
3 tension of less than 42 dyne/cm (42×10^{-3} N/m).

1 Claim 95 (previously presented): A method in accordance with
2 claim 94 wherein at least one of the coatings has a surface
3 tension of less than 36 dyne/cm (36×10^{-3} N/m).

1 Claim 96 (previously presented): A method in accordance with
2 claim 95 wherein at least one of the coatings has a surface
3 tension of less than 32 dyne/cm (32×10^{-3} N/m).

1 Claim 97 (previously presented): A method in accordance with
2 claim 88 wherein the base product, after leaving the mold in
3 which it was formed, has a surface tension of less than 44
4 dyne/cm (44×10^{-3} N/m) and greater than 30 dyne/cm (30×10^{-3} N/m)
5 and wherein at least the first coating applied to at least a
6 portion of said surface is water based and has a surface
7 tension of between 40 dyne/cm (40×10^{-3} N/m) and 27 dyne/cm
8 (27×10^{-3} N/m).

1 Claim 98 (previously presented): A method in accordance with
2 claim 97 wherein the base product upon leaving the mold has
3 a moisture content of less than 3 wt% and wherein by means
4 of one of the coatings moisture is introduced into the
5 coated product.

1 Claim 99 (previously presented): A method in accordance with
2 claim 98 wherein at least one of the coatings is a water-
3 based one-phase system.

1 Claim 100 (previously presented): A method in accordance
2 with claim 99 wherein the water-based one-phase system has
3 few micelles.

1 Claim 101 (previously presented): A method in accordance
2 with claim 86 wherein at least the first coating is applied
3 to the base product, the base product having a temperature
4 of between 20°C and 50°C and the coating having a lower
5 surface tension at the application temperature compared with
6 the surface tension of at least the portion of the base
7 product to which the coating is applied.

1 Claim 102 (previously presented): A method in accordance
2 with claim 101 wherein at least the first coating is applied
3 at a temperature of between 25°C and 50°C.

1 Claim 103 (previously presented): A method in accordance
2 with claim 86 wherein the first coating comprises at least
3 one component selected from the group consisting of
4 melamine, acrylic binders, water-resistant lacquers,
5 cellulose lacquers, cellulose acetate propionates,
6 polyethylene, polyacrylates, synthetic polymers, natural
7 polymers, synthetic waxes, natural waxes, polyactic acid and
8 derivatives thereof.

1 Claim 104 (previously presented): A method in accordance
2 with claim 103 wherein the first coating comprises one or
3 more waxes combined with at least one other component.

1 Claim 105 (previously presented): A method in accordance
2 with claim 103 wherein the second coating comprises at least
3 one component selected from the group consisting of acrylic
4 binders, latices, styrene-butadiene latex, polyvinyl
5 alcohol, polyvinyl acetate, polyacrylates, polyethylene
6 glycol, polyactic acid, synthetic polymers, natural
7 polymers, natural waxes, synthetic waxes and derivatives
8 thereof.

1 Claim 106 (previously presented): A method in accordance
2 with claim 105 wherein the second coating comprises
3 synthetic waxes in the form of ionic polyethylene waxes.

1 Claim 107 (previously presented): A method in accordance
2 with claim 105 wherein cross-linking compounds are
3 incorporated in at least one of the coatings.

1 Claim 108 (previously presented): A method in accordance
2 with claim 107 wherein the crosslinking compounds are
3 selected from the group consisting of zirconium acetate,
4 urea formaldehyde, melamine, formaldehyde, glyoxal, ammonium
5 zirconium carbonate, polyamideamine-epichlorohydrin,
6 epoxides, trimetaphosphate, and derivatives thereof.

1 Claim 109 (previously presented): A method in accordance
2 with claim 105 wherein at least one of the coatings
3 increases the water vapor resistance of the product.

1 Claim 110 (previously presented): A method in accordance
2 with claim 109 wherein as an outer coating the first and/or
3 second coating is fat resistant.

1 Claim 111 (previously presented): A method in accordance
2 with claim 105 wherein at least one of the coatings is
3 applied to only one part of the product and the surface
4 tension of the parts of the product that remain clear of
5 that coating are kept or rendered relatively low with
6 respect to the surface tension of said coating.

1 Claim 112 (previously presented): A method in accordance
2 with claim 105 wherein the base product is manufactured from
3 at least two different masses.

1 Claim 113 (previously presented): A method in accordance
2 with claim 112 wherein the two different masses form parts
3 of the base product which have different surface tensions.

1 Claim 114 (previously presented): A method in accordance
2 with claim 113 wherein at least one of the coatings is
3 applied to the base product by spraying.

1 Claim 115 (previously presented): A method in accordance
2 with claim 113 wherein at least one of the coatings is
3 applied to the base product by atomizing.

1 Claim 116 (previously presented): A method in accordance
2 with claim 113 wherein at least one of the coatings is
3 applied by airless spraying.

1 Claim 117 (previously presented): A method in accordance
2 with claim 113 wherein at least one of the coatings is
3 applied by compressed air spraying.

1 Claim 118 (previously presented): A method in accordance
2 with claim 86 wherein the base product has at least one
3 receiving cavity which is at least partially filled with
4 fluid of either the first or second coating and subsequently
5 poured empty whereby a film of the first or second coating
6 remains behind on at least a portion of the wall of the
7 receiving cavity.

1 Claim 119 (previously presented): A method in accordance
2 with claim 118 wherein on or in at least a part of the base
3 product there is provided prior to the application of the
4 first coating to said part an agent capable of influencing
5 the properties of said product part.

1 Claim 120 (previously presented): A method in accordance
2 with claim 119 wherein the agent is a softener.

1 Claim 121 (previously presented): A method in accordance
2 with claim 119 wherein the agent is water or a water
3 containing agent.

1 Claim 122 (previously presented): A method in accordance
2 with claim 119 wherein the second coating comprises the
3 agent and the first coating is substantially impermeable to
4 said agent.

1 Claim 123 (previously presented): A method in accordance
2 with claim 119 wherein at least one of the coatings
3 comprises a surface tension reducing which provides for a
4 reduction of the surface tension of that coating after it
5 has dried.

1 Claim 124 (previously presented): A method in accordance
2 with claim 123 wherein the surface tension reducing agent is
3 an oil or oil containing product.

1 Claim 125 (previously presented): A method in accordance
2 with claim 123 wherein the surface tension reducing agent is
3 a silicone oil.

1 Claim 126 (previously presented): A method in accordance
2 with claim 125 wherein the at least one coating comprises
3 between 0.5 and 15 volume % of a silicone oil.

1 Claim 127 (previously presented): A method in accordance
2 with claim 125 wherein the at least one coating comprises
3 between 2 and 10 volume % of a silicone oil.

1 Claim 128 (previously presented): A product in accordance
2 with claim 127 wherein a portion of the product is provided
3 with a moisture permeable or vapor permeable coating.

1 Claim 129 (previously presented): A product in accordance
2 with claim 128 wherein said portion is a portion of the
3 product which faces outward during use.

1 Claim 130 (previously presented): A product in accordance
2 with claim 129 wherein the product is a cup comprising a
3 bottom, a longitudinal edge of the longitudinal wall, at
4 least a portion of the outer side of the longitudinal wall
5 being provided with a substantially water proof coating and

6 at least a further part of the outer side of the
7 longitudinal wall being uncoated or provided with said
8 moisture permeable or vapor permeable coating.

1 Claim 131 (previously presented): A product in accordance
2 with claim 130 wherein at least a portion of the outer side
3 of the longitudinal wall is a portion which extends to the
4 free longitudinal edge thereof.

1 Claim 132 (previously presented): A product in accordance
2 with claim 131 wherein at least the bottom of the cup is
3 provided with two layers of coating.

1 Claim 133 (previously presented): A method in accordance
2 with claim 86 further comprising a release agent which is
3 incorporated in the at least one mass and wherein the
4 release agent alters the surface tension of at least a
5 portion of the base product compared with that of a base
6 product in the absence of the release agent.

1 Claim 134 (previously presented): A method in accordance
2 with claim 133 wherein the base product is formed in a mold
3 and wherein by means of the release agent egressing from the
4 at least one mass a substantially constant layer of the
5 release agent is obtained and maintained on the molding
6 surface of the mold during the manufacture of successive
7 parts.

1 Claim 135 (previously presented): A mass comprising natural
2 polymers for the manufacturing of a base product wherein the
3 base product is suitable for applying a coating thereto, and
4 wherein the mass comprises from 0.075 weight% and 1.5

Appl. No. 10/809,017
Amdt. dated Oct. 10, 2006
Reply to final Office action of April 10, 2006

5 weight% of a surface tension reducing agent in the form of
6 an oil or oil based agent calculated relative to the mass in
7 a dry state.

1 Claim 136 (previously presented): A mass in accordance with
2 claim 135 comprising from 0.1 weight% and 1 weight% of the
3 surface tension reducing agent.
